Priority number(s):

Abstract of JP2004136270

PROBLEM TO BE SOLVED: To efficiently produce 1-hexene from ethylene in a highly selective manner.

SOLUTION: A trimerization catalyst for ethylene comprises water and/or a water-containing compound and an alkyl group-containing compound, a compound obtained by removing a solid substance after water and/or the water-containing compound and the alkyl group-containing compound were reacted with each other and an organometal complex wherein a neutral multidentate ligand having a tripod type structure is coordinated. Ethylene is trimerized in the presence of a catalyst wherein a halogenated inorganic compound or a compound containing the Group 16 element is further added to the catalyst.
